

Judge Background and Pitch Considerations

A practical briefing for tailoring Tandem's demo to three judges: patient advocacy and behavioural health, ageing and mental health social impact, and public-good healthtech engineering.

Prepared May 10, 2026. Based on public research and Tandem repo context.

Recommended positioning: Tandem is care coordination infrastructure for family caregivers. It turns scattered notes, appointments, documents, and family messages into shared context, reviewed tasks, handovers, and accountability. It is not a diagnostic tool and does not replace clinicians or caregivers.

What To Lead With

Core story
After a clinic visit, instructions sit across WhatsApp, PDFs, voice notes, and memory. One sibling assumes another handled transport, medication reminders are unclear, and the primary caregiver silently becomes the project manager.

Demo proof
Show Tandem capturing a care item, extracting the important actions, assigning work across the care circle, showing workload imbalance, and generating a handover for a family member stepping in.

Judge Snapshot

Soh Lai Yee
President, Society of Behavioural Health Singapore; Group Chief Patient Officer, NUHS

Patient and family-centred care

Likely to value caregiver partnership, patient advocacy, behavioural insight, equity, and human review over automation for its own sake.

Jerome Yuen
Chief Growth Partner, The Therapy Platform; social impact and ageing-sector leader

Dignity, loneliness, mental health

Likely to value whether Tandem helps families show up consistently, reduces isolation, and respects older adults as people rather than cases.

Nicolas Spano
Head of HealthTech, Open Government Products

Public-good healthtech

Likely to test feasibility, reliability, privacy, workflow fit, measurable impact, and what is built versus mocked.

Demo Spine

STEP	WHAT TO SHOW	WHY IT LANDS
1. Fragmented care	Doctor memo, family note, or Telegram capture	Names the real coordination failure before introducing technology.
2. AI capture	Plain-English summary plus extracted tasks	Shows immediate reduction in admin burden, with human review.
3. Shared ownership	Assign or claim transport, admin, medication reminder, check-in	Moves from "Rachel remembers everything" to distributed care.
4. Load visibility	Care-load view showing imbalance	Makes invisible caregiver burden visible and actionable.
5. Handover	7-day brief for a sibling returning after being away	Shows continuity of care without making the lead caregiver repeat herself.
6. Safety close	No diagnosis, source-linked summaries, review-before-save	Pre-empts clinical safety, privacy, and AI-overreach concerns.

Judge-Specific Guidance

Soh Lai Yee

CARE PARTNERSHIP

Patient advocacy, behavioural health, person- and family-centred care

Relevant background

- President of the Society of Behavioural Health Singapore.
- Group Chief Patient Officer at NUHS, leading patient advocacy and person- and family-centred care work.
- Associated with initiatives involving patient, caregiver, and community participation in care design, including the Patient and Family Advocacy Council for Tengah General and Community Hospital.

How to pitch to her

- Say "caregivers as partners in care," not "AI manages the family."
- Highlight human review, plain-English summaries, and family consent.
- Frame Tandem as a behavioural nudge system that helps the whole care circle act earlier.

Reference	NUHS Caregivers' Day and TGCH Patient and Family Advocacy Council: patients, caregivers, advocates, and residents helping shape care practices, design, feedback, health education, and family support.
Features to highlight	AI-assisted capture, handover briefs, meeting summaries, workload visibility, review-before-save, medication reminders as notes only.
Refinements	Add "patient/caregiver reviewed" status, clearer consent language, source-linked summaries, and a "what changed since last visit" view.

Jerome Yuen

DIGNITY AND CONNECTION

Ageing communities, loneliness reduction, mental health access, nonprofit growth

Relevant background

- Chief Growth Partner at The Therapy Platform, which presents itself around accessible and secure counselling.
- Former CEO of Cycling Without Age Singapore, including work on senior social connection and VR trishaw experiences.
- Has nonprofit and fundraising experience, including Club Rainbow / Ride for Rainbows and World Vision Singapore.

How to pitch to him

- Show that Tandem helps families show up, not just close tasks.
- Include one emotional support task: call after rehab, visit, or check in after a difficult appointment.
- Talk about dignity, reassurance, and reducing loneliness without making the older adult passive.

Reference	Cycling Without Age's senior engagement work and Virtual Generations VR rides were designed around social isolation, mobility limits, reminiscence, and emotional wellbeing.
Features to highlight	Check-in tasks, family engagement loop, voice capture, warm timeline, handovers that help distant family members re-enter the care circle.
Refinements	Separate clinical/admin tasks from social connection tasks, add compassionate notification copy, and show caregiver appreciation or contribution visibility.

Nicolas Spano

FEASIBILITY AND IMPACT

Public-good engineering, healthtech delivery, practical user-centred systems

Relevant background

- Listed by OGP as Head of HealthTech.
- OGP HealthTech work includes Bright, Care360, Health Appointment System, Referral Exchange, Rooster, and Social360.
- OGP emphasizes rapid prototyping, real users, public-good delivery, security, and measurable outcomes.

How to pitch to him

- Be precise about what is already built versus v2 roadmap.
- Show workflow reliability: deterministic demo mode, review queues, task state, and auditability.
- Name metrics: handover time, extraction review rate, missed-task reduction, load imbalance reduction.

Reference	OGP HealthTech products solve coordination problems across appointments, referrals, social work, and clinical messaging. Tandem is analogous at the family-care layer.
Features to highlight	Next.js/Supabase/OpenAI stack, Telegram ingestion, mock fallback, structured task/timeline data model, handover generation, safety boundaries.
Refinements	Add source citations, a visible privacy model, simple audit trail, and one metrics screen or slide showing expected impact.

Feature Mapping

TANDEM FEATURE	WHY IT MATTERS	BEST JUDGE RESONANCE
Telegram, voice, document, and web capture	Meets families where information already lives instead of forcing a new workflow.	Soh: access and family participation. Nicolas: practical adoption.
AI extraction with review-before-save	Reduces admin work while keeping humans in control.	Soh: patient safety and agency. Nicolas: AI guardrails.
Task board and ownership	Turns vague "someone should do this" into visible responsibility.	All three.
Care-load visibility	Surfaces the invisible burden carried by the primary caregiver.	Soh: caregiver advocacy. Jerome: dignity and wellbeing.
Handover brief	Lets backup caregivers step in without interrogating the primary caregiver.	Soh: continuity of care. Nicolas: clear workflow value.
Meeting summaries	Captures decisions, open questions, and follow-ups from doctor or family meetings.	Soh: person-centred decisions. Nicolas: structured records.
Care signals and check-ins	Moves the product from record keeping toward timely family action.	Jerome: connection and loneliness. Nicolas: signal quality questions.

Suggested Closing Lines

For Soh

Tandem treats caregivers as partners in care, not background logistics.

For Jerome

Tandem makes it easier for families to show up consistently, not just during crises.

For Nicolas

Tandem is a practical public-health workflow tool: capture, structure, assign, audit, and measure.
